

Kickstart Your IT Career with Nimblix Technologies!

We are looking for passionate and talented individuals eager to start their journey in the tech industry. Whether your interest lies in **Software Development, Data Analytics, Software Testing, AI & ML Engineering, AWS Cloud, or Cybersecurity**, Nimblix Technologies offers the ideal platform to grow your career with **hands-on training, real-time project exposure, and mentorship from industry experts**.

About Us

Nimblix Technologies is a fast-growing IT solutions and consulting company headquartered in **Bangalore**. We specialize in delivering **end-to-end digital transformation solutions** across industries — from software development and AI-based automation to cloud and cybersecurity services. Our mission is to bridge the skill gap in the IT industry by nurturing fresh talent through **live project training, mentorship, and innovation-driven learning**. At Nimblix, we empower our team to **code, create, and innovate** while shaping the future of technology.

Job Roles We Are Hiring For

- Software Developer
- Data Analyst
- Software Tester
- AI & ML Engineer
- AWS Cloud Engineer

Cybersecurity Engineer

Department: Information Technology / Software Development / Data & Security

Location: Onsite / Hybrid (Electronic City, Bengaluru)

Employment Type: Full-Time

Compensation: ₹3–4 LPA (Based on performance and domain expertise)

Detailed Job Role Descriptions

1. Software Developer — Job Description

Roles & Responsibilities

- Design, develop, and maintain scalable web and enterprise applications.
- Collaborate with cross-functional teams including design, QA, and DevOps.
- Write clean, efficient, and maintainable code in modern technologies.
- Troubleshoot, debug, and optimize existing systems.
- Participate in code reviews, testing processes, and deployment pipelines.
- Work on live projects under senior mentorship.
- Implement best practices in software design, data structures, and algorithms.
- Prepare documentation and contribute improvement recommendations.

2. Data Analyst — Job Description

Roles & Responsibilities

- Collect, clean, and analyze data from various sources.
- Develop dashboards, reports, and visualizations using tools like Power BI / Tableau.
- Interpret data trends and provide insights to support business decisions.
- Work with databases (SQL, NoSQL) for data extraction and management.
- Collaborate with engineering and business teams to understand data needs.
- Support predictive analytics and data modeling activities.
- Assist in automating reporting workflows.

3. Software Tester (QA Engineer) — Job Description

Roles & Responsibilities

- Review requirements and prepare test scenarios, test cases, and test plans.
- Perform manual and basic automation testing.
- Identify, document, and track bugs using standard tools (JIRA, Bugzilla).
- Conduct functional, regression, integration, and UI/UX testing.
- Collaborate with developers to ensure high-quality product releases.
- Validate defects, verify fixes, and ensure stability before deployment.
- Prepare test reports and maintain QA documentation.

4. AI & ML Engineer — Job Description

Roles & Responsibilities

- Build and optimize machine learning models for various use cases.
- Work with Python, ML frameworks (TensorFlow, PyTorch, Scikit-learn).
- Analyze datasets and perform feature engineering.
- Train, validate, and evaluate ML models for accuracy and performance.
- Develop APIs and integrate ML models with applications.
- Research and implement new AI algorithms.
- Prepare documentation and collaborate with development teams for deployment.

5. AWS Cloud Engineer — Job Description

Roles & Responsibilities

- Deploy, manage, and monitor applications on AWS Cloud.
- Work with services like EC2, S3, Lambda, RDS, VPC, CloudWatch.
- Support CI/CD pipeline setup with tools like Jenkins or GitHub Actions.
- Configure security groups, IAM roles, and cloud network architecture.
- Troubleshoot cloud-related issues and optimize cloud performance.
- Assist in cloud migrations and infrastructure automation (Terraform).
- Ensure cloud security and cost optimization best practices.

6. Cybersecurity Engineer — Job Description

Roles & Responsibilities

- Monitor systems for security threats and vulnerabilities.
- Conduct security assessments, penetration testing, and risk analysis.
- Configure and manage firewalls, antivirus, and SIEM tools.
- Support incident response, threat analysis, and log monitoring.
- Implement policies for network security, data protection, and access control.
- Assist in compliance audits and cybersecurity reporting.
- Work with development teams to ensure secure coding practices

Required Skills & Qualifications

- Bachelor's degree in **Computer Science, IT, Engineering, BCA, or MCA**.
- Fresh graduates or final-year students (2024–2026 batch) passionate about IT.
- Strong fundamentals in **Java / Python / React / Node.js / SQL / AWS** (depending on role).
- Good problem-solving, analytical, and communication skills.
- Eagerness to learn new technologies and work in a collaborative environment.

Preferred / Added Advantage

- Hands-on knowledge of **cloud platforms (AWS / Azure / GCP)**.
- Familiarity with **DevOps tools (Docker, Jenkins, Kubernetes)**.
- Exposure to **AI/ML models, data visualization, or cybersecurity frameworks**.
- Previous **internship or academic project experience** in any IT domain.

Perks & Benefits

- Competitive **CTC (₹3–4 LPA)** for freshers.
 - Real-time project exposure and professional mentorship.
 - performance-based incentives.
 - Flexible work mode (Onsite / Hybrid).
 - Career growth with annual performance appraisals
 - Promotions and salary hikes based on performance, innovation, and contribution.
