

Machine Learning Engineer(I/II/III)

📍 Gurugram

As a part of the Gen AI team, you'll **design LLM-powered workflows** that go beyond responses—driving real action in customer support. From innovating with **prompt chaining to building workflows** that leverage LLMs for AI-driven solutions, you'll build intelligent systems that solve, scale, and evolve.

What you need to bring to the 'table'

- Strong skills in Python and familiarity with machine learning frameworks like PyTorch, TensorFlow etc
- Strong grasp of training, fine-tuning, and deploying modern ML models—especially LLMs—with hands-on experience in large-scale data preparation, creation, and management for model development
- Ability to apply cutting-edge AI research and agentic frameworks like LangChain/LangGraph to real-world problems, translating complex business challenges into impactful solutions
- Rigour in collaborating with cross-functional teams to build responsible AI systems, grounded in ethical principles, fairness, and real-world relevance

Are you ready for the coolest chapter of your life?
